## Dryer Vent Cleaning

Advanced Dryer Vent specializes in dryer vent cleanings and video inspections. Our company prides itself on having the best equipment on the market, ensuring our customers that their dryer vent has been properly cleaned and is safe to use.

### Why Advanced Dryer Vent?

In addition to servicing dryer vents, we are the inventor of the Vent Vision Wireless Inspection Camera. This revolutionary product allows us to see inside the entire length of the dryer vent. We have been able to test different cleaning methods, ensuring that what we do is absolutely the best

cleaning method. By using the Vent Vision Wireless Inspection Camera, we can also detect any problems, big or small, within the vent. The above photo was taken with the Vent Vision Wireless Inspection Camera and showcases a slightly disconnected vent, one that has gone undetected for years. Such a small issue can pose greater risks such as mold, carbon monoxide poisoning, and fires if left in this condition.

### **Multi Unit Properties**

Advanced Dryer Vent utilizes its high tech equipment to specialize in multi unit dryer vent cleanings. Our trucks are all equipped with commercial grade machinery that allows us to clean each vent from the outside of the home, with or without appointments. This makes our work effective, efficient, and convenient for residents and management companies. If we feel there is a problem, we can inspect the vent with our Vent Vision Wireless Inspection Camera and diagnose potential hazards while providing customers with video confirmation.
